

The Humanities Networked Infrastructure (HuNI) project will combine information from 30 of Australia's most significant cultural datasets and build a virtual research laboratory for humanities and creative arts researchers. These datasets comprise more than two million authoritative records, capturing the people, places, objects and events that make up Australia's rich cultural heritage.

The HuNI Virtual Lab will allow researchers from different disciplines to uncover new insights into Australia's cultural landscape through data discovery and analysis, and to then share their findings with others. The project began in May 2012 and runs until June 2014.

**COLLABORATIVE:** HuNI will break down barriers between disciplines and support collaboration and data-sharing between researchers

**ACCESSIBLE:** HuNI will make Australia's wealth of cultural resources available to researchers across the humanities
